Resuscitation Triangle Roles

Compressor

- Assesses the patient
- Perform 5 cycles of chest compressions
- Alternates with AED/Monitor/Defibrillator every 5 cycles or 2 minutes (or earlier if signs of fatigue set in)

AED Monitor/Defibrillator

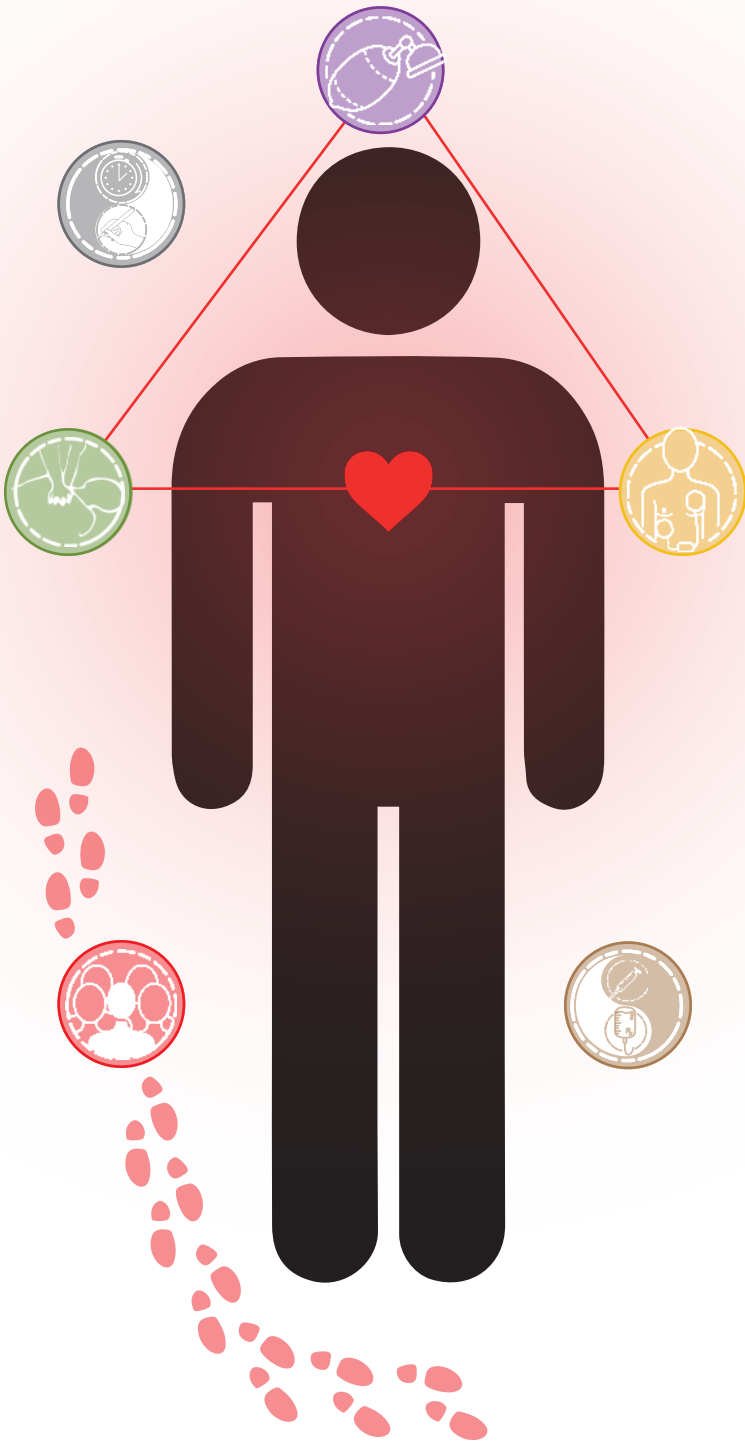

- Retrieve and operates the AED
- Alternates with Compressor every 5 cycles or 2 minutes (or earlier if signs of fatigue set in), ideally during rhythm analysis
- If a monitor is present, places it in a position where it can be seen by the Team Leader (and most of the team)

Airway

- Opens the airway
- Perform bag-mask ventilation
- Inserts airway adjuncts as appropriate

The team owns the code. No team member leaves the triangle except to protect his or her safety.

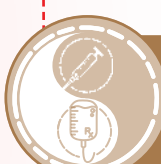

Leadership Roles

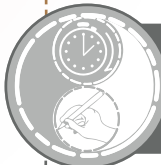

Team Leader

- Every resuscitation team must designate a defined leader**
- Assings roles to team members
- Determines treatment decisions
- Provides feedback to the team
- Assumes responsibility for roles not assigned

IV/IO/Medication

- An ACLS provider role
- Establish IV/IO access
- Administers medications

Timer/Recorder Historian

- Serve as event historian
- Records the time of interventions and medications (alerts when these are next due)
- Records the frequency and duration of interruptions in compressions
- Communicates these to the Team Leader (and the rest of the team)

*This is a suggested team formation. Roles may be adapted to local protocol.
